Brighton Training Centre Construction Works

Revised Sawdust and Manure Pits during Construction

Construction works will commence at Brighton Training Centre on Monday, 03 July 23 at 1000hrs.

During construction works the normal access to the sawdust and manure pits opposite stable blocks will be restricted. This is due to the construction of the concrete vee drain to join all the drainage pits together which runs parallel along the track side of the road.

To prevent damage to the newly formed and poured concrete vee drain by tractors and wheelbarrows accessing the existing pits and as a temporary measure, during the construction period.

Manure and sawdust will be located in the following areas:

- Between Stable One and the Dam
- Between Stables Six and Seven

Construction will commence from the lower end of the stable road and effect pits in this area initially before construction works progress further up the road.

Tasracing will provide the sawdust during the construction period as a Brighton Training Centre community asset on a fair use basis. Manure will be removed from site daily.

Porky will be available on-site to assist, should you require any further information regarding these locations.

Thank you for your collaboration and cooperation during the construction period.
