Greyhound Retirement Preparation Scheme

Dental Certificate

Examination date ___/___/_____ Greyhound Name _____

Ear Brand _____ Microchip N° _____

The above greyhound was checked for dental disease with the following findings:

<input type="checkbox"/>	Stage 1	Normal Healthy Teeth and Gums No treatment required, monitor at regular intervals.	
<input type="checkbox"/>	Stage 2	Mild Gingivitis and Plaque The margin of the attached gum is inflamed and swollen. Plaque and tartar are present. Dental cleaning is recommended within a month to remove buildup and prevent the progression of dental disease.	
<input type="checkbox"/>	Stage 3	Moderate Gingivitis Entire gum is inflamed and swollen. The mouth is painful and an odour is noticeable. Dental cleaning needed as soon as possible.	
<input type="checkbox"/>	Stage 4	Severe Gingivitis The gum is cherry red and bleeding, damaged by infection and calculus. Sore mouth and foul breath are evident. A dental cleaning is recommended immediately to remove calculus, along with antibiotics and pain medications. Extractions of teeth are likely to be required.	
<input type="checkbox"/>	Stage 5	End Stage Periodontal Disease Chronic infection is destroying the teeth, bone, and gums. Bacteria are constantly circulating throughout the body and can cause heart, liver, and kidney problems. Pain is constant. Dental cleaning is immediately needed. Extractions, antibiotics, and pain medication will be necessary.	

The following treatment was carried out:

- Recommended treatment carried out: scale & polish _____ extractions _____
